**GENERAL INSTRUCTIONS/ GUIDELINES FOR EXECUTION OF CURRICULUM**

---

I. The B.Sc. (Honours) Zoology will be of three years duration semester-based Choice Based Credit System [CBCS] course.

II. There will be broadly three types of courses for B.Sc. (Honours) Zoology degree program.

1. The **Core Courses** (14 courses for honours; and 4 discipline specific papers) will be of 6- credits each including 2 credits assigned to the practical component. Thus a candidate will have to pass 14 courses for earning  $14 \times 6 = 84$  credits during six semesters. Each of the 6-credits courses will carry 100 marks. These 100 marks will be split into marks assigned for Theory [TH]: 40 marks; Practical [P]: 30 marks and Internal Assessment [IA]: 30. The Internal Assessment [30 marks] will include one Multi Choice Questions (MCQ)-based examination of 25 marks each [25 or 50 questions of 1.0 or 0.5 mark each as the case may be]; and Classroom Attendance Incentive marks (5 marks). The Lab-based practical will be of 2-hours [One credit]. A total of  $14 \times 6 = 84$  credits could be accumulated under these courses during the Honours degree program.
2. The **Elective Courses** will be chosen from a pool of courses and which may be very specific or specialized or advanced or supportive to the discipline/ subject of study or which provides an extended scope or which enables an exposure to some other discipline/ subject/ domain or nurtures the candidate's proficiency / skill. The Elective Courses will include;

**Discipline Specific Elective [DSE] Courses:** A total of 4 courses offered under the main discipline/ subject of study is referred to as Discipline Specific Elective. These courses are discipline related and/ or interdisciplinary in nature. A total of  $4 \times 6 = 24$  credits could be accumulated under DSE courses during the Honours degree program.

**Generic Elective [GE] Courses:** A total of 4 courses of 6-credits each including 2 credits assigned for the practical component of each of these courses *i.e.* one course per 1<sup>st</sup> to 4<sup>th</sup> semester will be studied by the candidates. An elective course chosen from an unrelated discipline/ subject, with an intention to seek exposure beyond discipline(s) of choice is called Generic Elective Course. The purpose of this category of papers is to offer the students the option to explore disciplines of interest beyond the choices they make in Core and Discipline Specific Elective papers. Further, a course offered in a discipline/ subject may be treated as an elective by other discipline/ subject and vice versa and such electives may also be referred to as Generic Elective Course. A total of  $4 \times 6 = 24$  credits could be accumulated under GE courses during the Honours degree program.

3. **Ability Enhancement Compulsory Courses [AECC]:** Ability Enhancement Courses are of two types; Ability Enhancement Compulsory Courses [AECC] and Skill Enhancement Courses [SEC]. A total of  $4 \times 4 = 16$  credits could be accumulated under these courses during the Honours degree program *i.e.*  $4 \times 2 = 8$  credits for AECC, and  $4 \times 2 = 8$  credits for SEC courses.

The AECC courses are the mandatory courses based upon the content that leads to knowledge enhancement; i. Environment Science and ii. English/ Hindi/ MIL Communication. All these are mandatory courses for obtaining a B.Sc. (Honours) degree in the concerned subject. These courses are mandatory for all disciplines. SEC courses are value-based and/ or skill-based and are aimed at providing hands-on-training, competencies, skills *etc.* A minimum of two such courses for obtaining an Honours degree are selected amongst the courses designed to provide value-based and/ or skill-based knowledge and may contain both theory and lab/ hands-on training. The main purpose of these courses is to provide students life-skills in hands-on mode so as to increase their employability.

- III. Practical [P] component has been included in every core and discipline/ generic specific elective paper. The list of practicals to be conducted by the candidates has been provided alongside each of such courses. The marks (30 marks) for the practical examination will be split as follows;

Write up of Practical I:	5 marks
Write up of Practical II:	5 marks
Performance of any one of these practicals:	7 marks
Practical record/ notebook:	5 marks
Viva voce:	8 marks

**IV. Classroom Attendance Incentive:** Those candidates who have greater than 75% attendance (for those participating in Co-curricular activities, 25% will be added to per cent attendance) will be awarded CCA marks as follows:

≥ 75% but < 80%	1 marks
≥ 80% but <85%	2 marks
≥ 85 but <90%	3 marks
≥ 90% but < 95%	4 marks
≥ 95% TO 100%	5 marks

**V.** The admission to B.Sc. (Honours) Zoology programme of Himachal Pradesh University will be as per guidelines of Himachal Pradesh University, Shimla from time to time.

- i. The candidate should have passed 10+2 (class XII) Examination or its equivalent from a recognized Board/University with any of the three subjects out of Physics, Chemistry and Biology or any other science subjects with 50% or equivalent grade (for SC/ST candidates marks of eligibility will be 45% or equivalent grade).
- ii. In case of candidates who are studying in University/ Board/ College/ Schools in any of the foreign countries the eligibility/ Qualifying marks will be the same as recognized/equivalent to 10+2 by the University or the association of the Indian University with 50% marks of equivalent grade (for SC/ST candidates, eligibility will be 45% marks or equivalent grade).
- iii. The candidate who has appeared in the qualifying examination but whose result has so far not been declared can also apply but his/her eligibility for the entrance test will be purely provisional subject to the condition that he/she has to produced a passing certificate scoring at least the minimum percentage of marks as prescribed for the qualifying examination on the day and the specified time of counseling.
- iv. The candidate shall not be more than 22 years of age as on 01<sup>st</sup> July of the year of admission. Date of birth as recorded in the Secondary Education Board/ University Certificate Only will be considered as authentic.

**Unit 1: Introduction to Ecology** **6**

History of ecology, Autecology and synecology, Levels of organization, Laws of limiting factors, Study of physical factors

**Unit 2: Population** **24**

Unitary and Modular populations

Unique and group attributes of population: Density, natality, mortality, life tables, fecundity tables, survivorship curves, age ratio, sex ratio, dispersal and dispersion

Exponential and logistic growth, equation and patterns, r and K strategies

Population regulation - density-dependent and independent factors

Population interactions, Gause's Principle with laboratory and field examples, Lotka-Volterra equation for competition and Predation, functional and numerical responses

**Unit 3: Community** **12**

Community characteristics: species richness, dominance, diversity, abundance, vertical stratification, Ecotone and edge effect; Ecological succession with one example

Theories pertaining to climax community

**Unit 4: Ecosystem** **14**

Types of ecosystems with one example in detail, Food chain: Detritus and grazing food chains, Linear and Y-shaped food chains, Food web, Energy flow through the ecosystem, Ecological pyramids and Ecological efficiencies

Nutrient and biogeochemical cycle with one example of Nitrogen cycle Human modified ecosystem

**Unit 5: Applied Ecology** **4**

Ecology in Wildlife Conservation and Management

## CORE COURSE VI

### ANIMAL PHYSIOLOGY: CONTROLLING AND COORDINATING SYSTEMS ZOOL(H) 302 TH

<b>THEORY</b>	<b>(Credits 4)</b>
<b>Unit 1: Tissues</b>	<b>6</b>
Structure, location, classification and functions of epithelial tissue, connective tissue, muscular tissue and nervous tissue	
<b>Unit 2: Bone and Cartilage</b>	<b>4</b>
Structure and types of bones and cartilages, Ossification, bone growth and resorption	
<b>Unit 3: Nervous System</b>	<b>10</b>
Structure of neuron, resting membrane potential, Origin of action potential and its propagation across the myelinated and unmyelinated nerve fibers; Types of synapse, Synaptic transmission and, Neuromuscular junction; Reflex action and its types - reflex arc; Physiology of hearing and vision.	
<b>Unit 4: Muscle</b>	<b>12</b>
Histology of different types of muscle; Ultra structure of skeletal muscle; Molecular and chemical basis of muscle contraction; Characteristics of muscle twitch; Motor unit, summation and tetanus	
<b>Unit 5: Reproductive System</b>	<b>10</b>
Histology of testis and ovary; Physiology of male and female reproduction; Puberty, Methods of contraception in male and female	
<b>Unit 6: Endocrine System</b>	<b>18</b>
Histology of endocrine glands - pineal, pituitary, thyroid, parathyroid, pancreas, adrenal; hormones secreted by them and their mechanism of action; Classification of hormones; Regulation of their secretion; Mode of hormone action, Signal transduction pathways for steroidal and non-steroidal hormones; Hypothalamus (neuroendocrine gland) - principal nuclei involved in neuroendocrine control of anterior pituitary and endocrine system; Placental hormones

<b>THEORY</b>	<b>(CREDITS 4)</b>
<b>Unit 1: Carbohydrates</b>	<b>8</b>
Structure and Biological importance: Monosaccharides, Disaccharides, Polysaccharides and Glycoconjugates	
<b>Unit 2: Lipids</b>	<b>8</b>
Structure and Significance: Physiologically important saturated and unsaturated fatty acids, Tri-acylglycerols, Phospholipids, Glycolipids, Steroids	
<b>Unit 3: Proteins</b>	<b>14</b>
<b>Amino acids:</b> Structure, Classification and General properties of $\alpha$ -amino acids; Physiological importance of essential and non-essential $\alpha$ -amino acids	
<b>Proteins:</b> Bonds stabilizing protein structure; Levels of organization in proteins; Denaturation; Introduction to simple and conjugate proteins	
<b>Immunoglobulins:</b> Basic Structure, Classes and Function, Antigenic Determinants	
<b>Unit 4: Nucleic Acids</b>	<b>12</b>
Structure: Purines and pyrimidines, Nucleosides, Nucleotides, Nucleic acids Cot Curves: Base pairing, Denaturation and Renaturation of DNA Types of DNA and RNA, Complementarity of DNA, Hypo-Hyperchromaticity of DNA	
<b>Unit 5: Enzymes</b>	<b>18</b>
Nomenclature and classification; Cofactors; Specificity of enzyme action; Isozymes; Mechanism of enzyme action; Enzyme kinetics; Factors affecting rate of enzyme-catalyzed reactions; Derivation of Michaelis-Menten equation, Concept of $K_m$ and $V_{max}$ , Lineweaver-Burk plot; Multi-substrate reactions; Enzyme inhibition; Allosteric enzymes and their kinetics; Regulation of enzyme action

### ANIMAL BEHAVIOUR AND CHRONOBIOLOGY ZOOL(H) 503 B TH

#### THEORY (Credits 4)

#### Unit 1: Introduction to Animal Behaviour 10

Origin and history of Ethology; Brief profiles of Karl Von Frish, Ivan Pavlov, Konrad Lorenz, Niko Tinbergen, Proximate and ultimate causes of behaviour, Methods and recording of a behaviour

#### Unit 2: Patterns of Behaviour 10

Stereotyped Behaviours (Orientation, Reflexes); Individual Behavioural patterns; Instinct vs. Learnt Behaviour; Associative learning, classical and operant conditioning, Habituation, Imprinting.

#### Unit 3: Social and Sexual Behaviour 16

Social Behaviour: Concept of Society; Communication and the senses; Altruism; Insects' society with Honey bee as example; Foraging in honey bee and advantages of the waggle dance.

Sexual Behaviour: Asymmetry of sex, Sexual dimorphism, Mate choice, Intra-sexual selection (male rivalry), Inter-sexual selection (female choice), Sexual conflict in parental care.

#### Unit 4: Introduction to Chronobiology 8

Historical developments in chronobiology; Biological oscillation: the concept of Average, amplitude, phase and period. Adaptive significance of biological clocks

#### Unit 5: Biological Rhythm 12

Types and characteristics of biological rhythms: Short- and Long- term rhythms; Circadian rhythms; Tidal rhythms and Lunar rhythms; Concept of synchronization and masking; Photic and non-photic zeitgebers; Circannual rhythms; Photoperiod and regulation seasonal reproduction of vertebrates; Role of melatonin.

#### Unit 8: Biological Clocks 4

Relevance of biological clocks; Chronopharmacology, Chronomedicine, Chronotherapy.

### ANIMAL BIOTECHNOLOGY ZOO(H) 503CTH

<b>THEORY</b>	<b>(Credits 4)</b>
<b>Unit 1. Introduction</b>	<b>8</b>
Concept and scope of biotechnology	
<b>Unit 2. Molecular Techniques in Gene manipulation</b>	<b>24</b>
Cloning vectors: Plasmids, Cosmids, Phagemids, Lambda Bacteriophage, M13, BAC, YAC, MAC and Expression vectors (characteristics).	
Restriction enzymes: Nomenclature, detailed study of Type II.	
Transformation techniques: Calcium chloride method and electroporation.	
Construction of genomic and cDNA libraries and screening by colony and plaque hybridization	
Southern, Northern and Western blotting	
DNA sequencing: Sanger method	
Polymerase Chain Reaction, DNA Finger Printing and DNA micro array	
<b>Unit 3. Genetically Modified Organisms</b>	<b>18</b>
Production of cloned and transgenic animals: Nuclear Transplantation, Retroviral Method, DNA microinjection	
Applications of transgenic animals: Production of pharmaceuticals, production of donor organs, knock out mice.	
Production of transgenic plants: <i>Agrobacterium</i> mediated transformation.	
Applications of transgenic plants: insect and herbicide resistant plants.	
<b>Unit 4. Culture Techniques and Applications</b>	<b>10</b>
Animal cell culture, Expressing cloned genes in mammalian cells, Molecular diagnosis of genetic diseases (Cystic fibrosis, Sickle cell anemia)	
Recombinant DNA in medicines: Recombinant insulin and human growth hormone, Gene therapy

Carbohydrates, Lipids, Proteins- Definition, Classification, their dietary source and role

Vitamins- Fat-soluble and Water-soluble vitamins- their dietary source and importance

Minerals- Iron, calcium, phosphorus, iodine, selenium and zinc: their biological functions

##### Unit 3: Health 15

Introduction to health- Definition and concept of health

Major nutritional Deficiency diseases- Protein Energy Malnutrition (kwashiorkor and marasmus), Vitamin A deficiency disorders, Iron deficiency disorders, Iodine deficiency disorders- their causes, symptoms, treatment, prevention and government programmes, if any.

Life style related diseases- hypertension, diabetes mellitus, and obesity- their causes and prevention through dietary and lifestyle modifications

Social health problems- smoking, alcoholism, drug dependence and Acquired Immuno Deficiency Syndrome (AIDS) - their causes, treatment and prevention

Common ailments- cold, cough, and fevers, their causes and treatment

##### Unit 4: Food hygiene: 15

Potable water- sources and methods of purification at domestic level

Food and Water borne infections: **Bacterial infection:** Cholera, typhoid fever, dysentery; **Viral infection:** Hepatitis, Poliomyelitis, **Protozoan infection:** amoebiasis, giardiasis; **Parasitic infection:** taeniasis and ascariasis their transmission, causative agent, sources of infection, symptoms and prevention
